## What are Standard Format Markers?

In general terms, a markup language is a special notation for identifying the components and structure of an electronic document. It combines *extra information about the text* together with the text itself. The extra information is what is expressed using markup. Markup can also include information about the intended presentation of the text, or instructions for how a software process should handle the text. A good markup system is easily identified as separate from the text itself.

Standard Format Markers have been used for many years within the Bible translation community as a method for identifying the unique textual elements which exist within an electronic scripture document. SFMs start with a backslash character "\" and end with the next space. Over time many different local "standards" for SFM use were developed, adapted, and used, for supporting the varied requirements of Bible translation and publishing projects around the globe.

## History of USFM

The divergent use of SFMs led to a variety of problems – most notably the challenges associated with sharing text or related text processing tools among entities, departments, or partner organizations. Separate and ongoing maintenance of duplicated tools and procedures, which were required for managing the flow of the text through its life-cycle, became costly and very difficult to support.

In March 2002 a working group was established within the United Bible Societies with the mandate of "crafting a unified specification for SFM use across 4 UBS areas". Having one SFM standard would provide numerous benefits:

- Allow more thought and effort to be put into developing just one set of tools and utilities to be shared by all projects:
  - Tools for text checking and analysis.
  - Tools for developing supporting textual resources such as concordances and indexes.
  - Tools for streamlining the publishing process.
- Eliminate or minimize duplication of effort in providing these tools.
- Allow better sharing of both tools and data.
- Allow Paratext users to use one tested and proven stylesheet.
- Prepare the project for a smoother transition to other markup formats or future technologies.

Ideally an SFM standard would have as one of its goals that of marking common scriptural element types, and not formatting (presentation) information. USFM has attempted to "unify" a long history of SFM type scripture markup "standards", some of which were more or less strict in their tolerance for format-oriented markers. The primary focus in USFM development was on *unification*, not markup *creation*. What this means is that USFM inherits support for both the positive (and some negative) aspects of pre-existing SFM marker use. The USFM working group did not wish to create an unmanageable conversion task for legacy SFM encoded texts.

## Unification Notes

- Markers which would be used in a broader text "environments" were named using a reserved initial letter, rather than an opening and closing tag:
  - \i - [Introductions](#)
  - \f - [Footnotes](#)
  - \x - [Cross references](#)
  - \e - [Explanatory \(study\) material](#) - for extended notes, sidebars and bridge materials.
- Related marker types were often consolidated using "numbered" marker definitions.
  - Example: \mt#, \ms#, \s#, \li# etc., where the variable # represents a number which can indicate a level or relative weighting.
- Marker definition "collisions" were resolved (same marker used to mark different content).

## Software Notes

- Translation editors which implement support for USFM encoded text may provide a formatted view of the text using a set of style definitions for each USFM marker. These "stylesheets" most often refer to these formatting definitions as paragraph and character styles.
- In USFM, character level markup can be nested (embedded) within a paragraph element, or another character element, but (depending on the way in which the markers are written) does not necessarily cancel out the previous marker's attributes. [Paratext](#) (a UBS translation editor) is not capable of rendering all of the display variations that would be implied due to marker nesting.

## Markup Additions/Extensions

Over the course of its development it has become clear that the USFM standard will not likely include and handle markup for all potential (real or perceived) markup needs which a project may require. There are a number of reasons for this, which include:

- **The intention of keeping the USFM marker inventory manageable** from a typical end user's perspective.  
Some may argue that the more than 180 existing marker possibilities are already more than challenging enough to select from and use correctly. For this reason a "draft" stylesheet was created for Paratext editing which lists only the essential markers for editing a typical translation's 1st draft text.
- **The intention to encourage content oriented markup.**  
Although USFM contains markers which are format (presentation) oriented (see [History of USFM](#)), the use of these is typically discouraged, wherever a suitable alternative is available.
- **The intention to maintain a stable target for tool developers.**  
The USFM marker inventory cannot continue to evolve and develop indefinitely without minimizing the benefit it potentially offers to developers working on text checking, analysis, conversion, and publishing tools. A stable target is needed for these tools to work against.

Since USFM 1.0, requests for additions to the standard have been received and considered by the USFM committee (see [Release Notes](#) for some details). The committee has made a choice to specifically exclude new markers submissions that specify formatting from becoming part of USFM. What this means is that the USFM standard is open to the consideration of new markup needs, but closed to allowing new format oriented markup. At times this position has caused some frustration for users who might otherwise be quite satisfied with USFM, but would be greatly assisted by adding markup to their text which is not a part of the standard.

### Option: The \z namespace

As a means of offering a type of solution to the need for occasional local markup additions/extension, USFM recommends that any additional user generated markup should begin with \z (e.g. \zMyMarker). Markers in this namespace will not be considered a part of the USFM standard, or be generally supported in USFM aware applications. This namespace will act as a type of "private use area". It will be the user or tool builder's responsibility to support \z markup in ways which meet a local need. Other USFM processing tools cannot be expected to handle \z markup or associated text, and are free to ignore them when they are encountered in the text.

#### **Important Caution!**

Scripture translation and publishing software [Paratext](#) and [Publishing Assistant](#) both provide a mechanism for adding information about user generated or customized markers to a specific project's configuration. This makes it possible to support proper functioning of checking and formatting tools for the added markup.

However, *it is much less likely* that emerging digital publishing systems and work-flows will support user-generated/non-standardized project markup. Current procedures for interacting with these partner environments requires that translation data is delivered in rigidly validated formats which conform to specific agreed-upon interchange standards, such as the known USFM marker inventory, or some XML-based equivalents. Since connecting with these environments is much more exclusively software-driven than with many print production tools, encountering unknown markup within the publishing processes is a significant problem.

Please remain aware of this caution before introducing non-standard USFM markup within a scripture translation project text.

### Paratext Stylesheets

The most recent full and draft USFM stylesheet files for use with the Paratext translation editor are always available from <http://paratext.org/usfm>.

## 1.1 Release Notes

### 2.4 - June 2013

#### Marker Additions

- Support for nesting character markup.

Full support for the nested character markup syntax has been included in Paratext >=7.4, Publishing Assistant >=4.1, and the XML export format from Paratext known as "USX".

### 2.35 - February 2012

Primarily a documentation update.

Paratext 7.3 and beyond provides support for study Bible content authoring, within a single project text, through an enhanced multi-pane editing window. Earlier USFM documentation releases discussed study Bible content markup using one or two additional related project texts. This multi-project authoring configuration is no longer recommended now that there is workable authoring environment supporting a single-project study Bible text. Information relating to study Bible content markup and authoring practice in this documentation supersedes any reference to separate notes or sidebar projects in the earlier release notes (below).

- Deprecated \fs (footnote summary text) - not required when working within a single project study Bible text.

### 2.3 - July 2010

Version numbers for the base USFM stylesheet and the study Bible notes and sidebars stylesheets have been synchronized to 2.3. This reflects the readiness of the Paratext 7.1 editor to support study Bible authoring.

#### Marker Additions

- DEPRECATED - Added study Bible footnote marker \fs for marking a footnote summary text.
- Added study Bible cross reference marker \ex for adding additional cross-references to the notes project.

#### Marker Revisions

- Permit cross references to be added to the study Bible notes project.
- Revised markup specification for study Bible sidebars (now use any title, paragraph, poetry, table, or special text marker elements).

### 2.2 – October 2008

#### Marker Additions

- Added character markers xot...xot\* and xnt...xnt\* for uniquely marking target references to OT and NT passages (use of these markers is optional)
- Added igt...igt to mark (scripture) quotations appearing in the introduction.

#### Marker Revisions

- imte# now includes an optional numeric variable (multiple levels).
- No-break space should now be marked using ~ (tilde), not !\$

### 2.1 – April 2007

#### Marker Additions

- Added \ili for marking introduction list items.
- Reviewed and finalized Periphera content markup:
  - Added new back matter books CNC, GLO, TDX, NDX.
  - Added INT book for scripture division Introductions.
  - Updated scheme for marking content divisions in FRT, INT, BAK, OTH
  - Added various new content division markers.

## Marker Revisions

- Finalized Study Bible Content markup.
- Reviewed and finalized Peripheral content markup (see "Marker Additions" above).
- Changed \rq...\rq\* from paragraph to character level markup.
- Change \ca...\ca\* from paragraph to character level markup.

## 2.05 – June 2006

### Marker Additions

- Added \rq for marking inline quotation references.

## 2.04 – October 2005

### Marker Additions

- Added \toc3 for providing the standard abbreviation for a book.

## 2.03 – August 2005

### Marker Additions

- Added \toc1 and \toc2 for providing and marking long and short table of contents texts.
- Added \fl for marking footnote "label" text items.
- Added \fp for marking footnote additional paragraphs.

## 2.0 – October 2004

*The following sections outline changes in USFM from 1.53 to 2.0.*

### Marker Revisions

- Removed \pdi and \pde, and substitute with embedded text markup (under additions, below)
- Removed \wr ... \wr\*. This was really a duplicate of \w ... \w\* used for marking words in the scripture text which are included in the wordlist.
- Removed \ps. This is used in conjunction with \nb to indicate that the paragraph spans the chapter boundary. It should be sufficient to just start the new chapter with \nb and use the appropriate paragraph marker for the previous chapter (\p, \m etc.)

### Marker Additions

- Add character style \em ... \em\* for "emphasis".
- In Peripherals:
  - Add \intro section to Front Matter (in addition to Preface).
  - Add \maps (Maps Index) section to Back Matter.
  - Paratext will be adjusted to include predefined "standard" books for FRT, BAK, and OTH rather than using the book names XXA, XXB, and XXC for these materials.
- Add \sr for marking the text references range listed under a section heading \s.
- Add the following markers for "embedded text" (see example references – not all versions mark these items the same).
  - \pm - Embedded text paragraph
  - \pmo - Embedded text opening
  - \pmc - Embedded text closing
  - \pmr - Embedded text refrain
  - \qm# - Embedded text poetic line
- Add character style \pro ... \pro\* for indicating pronunciation (in CJK texts).
- Add character style \wj ... \wj\* for marking words of Jesus.

## 1.2 Syntax Notes

### In this topic:

- [Numbered Markers](#)
- [Endmarkers in Footnote and Cross References](#)
- [Documentation Notes](#)

### Numbered Markers

Some USFM markers include an optional numeric variable, which is represented in this documentation by a hash character (#). In USFM the number indicates:

- A portion of a complete element, or relative weighting of the "pieces" of the elements, such as \mt1, \mt2, \mt3 which are all parts of a major title.
- The level of division (hierarchy).
- The level of indentation relative to other like elements, as in poetry (\q#) or lists (\li#) or outlines (\io#).

**\marker = \marker1** — The unnumbered version may be used when only one level of \marker exists within the project text. Numbers should always be included when more than one level of the marker exists within the project text.

The variable # should not be used to indicate a *specific occurrence* in scripture of the element type (e.g. using \s3 to represent the location of the particular section heading before the "Story of Creation" in Genesis 1).

### Endmarkers in Footnotes and Cross References

The boundaries of footnote or cross reference text are defined by an opening and closing marker, as in the following footnote example:

```
\f_+(\fr_REF_)footnote content\f*
```

The individual elements which make up the footnote or cross reference content are defined as character level markers, which means that they each define a *beginning* and a corresponding *end* marker. The Paratext translation editor will interpret the presence of a new marker as an implicit closure of any preceding character level marker. For this reason a majority of translation projects have adopted the approach of authoring footnote or cross reference content without supplying the explicit end marker. Some examples of the two acceptable markup approaches for notes is provided below (**A** = implicit closure; **B** = explicit end marker):

- A.** \f + \fk Issac:\ft In Hebrew means "laughter"\f\*
- B.** \f + \fk Issac:\fk\* In Hebrew means "laughter"\f\*
- A.** \f + \fr 1.14 \fq religious festivals;\ft or \fq seasons.\f\*
- B.** \f + \fr 1.14\fr\* \fq religious festivals;\fq\* or \fq seasons.\fq\*\f\*
- A.** \f + \fr 2.4 \fk The \nd Lord\nd\*: \ft See \nd Lord\nd\* in Word List.\f\*
- B.** \f + \fr 2.4\fr\* \fk The \nd Lord\nd\*:\fk\* See \nd Lord\nd\* in Word List.\f\*

## Documentation Notes

Individual markers are presented in this manual in dark blue text, with a light grey background. For example:

### **\usfm#(\_text...)**

- Required spaces are indicated with an underscore \_.
- Parameters or variables are indicated in ALLCAPS or by a special character such as the hash mark #. A description of the meaning or use of a variable or parameter is provided below the marker.
- Optional or suggested information is shown as a text example in parentheses – like (text...). In some cases an underscore is listed within the parentheses, which indicates that the space is needed only when text follows the marker. Most paragraph or poetic markers (like \p, \m, \q# etc.) can be followed immediately by a verse number (\v) on a new line.

## 2 Identification

### Markers in this section:

`\id`, `\ide`, `\sts`, `\rem`, `\h`, `\toc1`, `\toc2`, `\toc3`

### `\id_<CODE>_` (Name of file, Book name, Language, Last edited, Date etc.)

- File identification.
- This is the initial USFM marker in any scripture text file.
- CODE is the standard 3 letter UBS/SIL scripture book abbreviation.

#### ▼ Example

##### Text - Matthew (GNT)

```
\id MAT 41MATGNT92.PTX, Good News  
Translation, June 2003
```

##### Formatting Example

*The text following this marker is not normally used in any formatted presentation.*

### `\ide_<ENCODING>`

- An optional character encoding specification.
- This marker should be used to specify the character encoding of the text within the file. For example: CP-1252, CP-1251, UTF-8, UTF-16, OR Custom <specify font name>. If the character encoding does not conform to a known standard, but is rather a customized solution for the project, a minimum of the name of the font used for the project should be included. For archive purposes, texts which rely upon a custom encoding solution should be converted to Unicode, if at all possible.

#### ▼ Examples

##### Text - Matthew (GNT)

```
\ide UTF-8  
\ide CP-1252  
\ide Custom (TGUARANI.TTF)
```

##### Formatting Example

*The text following this marker is not normally used in any formatted presentation.*

### `\sts_<STATUS CODE>`

- Project text status tracking.
- *The contents of the status marker can be defined by the downstream system being used to track project status.*
- Multiple status entries can be contained in a book to indicate that various portion of the text are present with different draft levels. If an entire book is complete at a given status level, only one status entry is required.

**i** For UBS TMS tracked projects the contents of the field must be a single digit, as follows:

- 1 (first draft)
- 2 (team draft)
- 3 (reviewed draft)
- 4 (clean text)

#### ▼ Example

##### Text

```
\sts 2
```

##### Formatting Example

*The text following this marker is not normally used in any formatted presentation.*

**\rem\_text...**

- Used for adding brief comments by a translator, consultant, or support person.

## ▼ Example

**Text**

```
\rem Assigned to <translator's name>.
\rem First draft complete, waiting for checks.
```

**Formatting Example**

*The text following this marker is not normally used in any formatted presentation.*

**\h#\_text...**

- Running header text.
- The variable # represents distinct components or levels of text required for the running header presentation (e.g. inside, outside, sub-division/section etc.).

## ▼ Example

**Text - Matthew (GNT)**

```
\h Matthew
```

**Formatting Example**

Matthew 2–4

to kill all the boys in  
neighborhood who were  
nger—this was done

<sup>7</sup>When John saw ma  
Sadducees coming to  
tized, he said to them, ‘

**\toc1\_text...**

- Long table of contents text.

**\toc2\_text...**

- Short table of contents text.

**\toc3\_text...**

- Book abbreviation.

## ▼ Example

**Text - Matthew (GNT)**

```
\h Matthew
\toc1 The Gospel According to
Matthew
\toc2 Matthew
\toc3 Mat
```

**Formatting Example****Table of Contents**

The Gospel According to Matthew	Matthew	1
The Gospel according to Mark	Mark	37
The Gospel according to Luke	Luke	63

**Implementing toc1 and toc2:**

The **\toc1**, **\toc2**, and **\toc3** markers are provided to assist publishing tools in automating the generation of a table of contents. They can be included in the main text file for each scripture book, after **\h**. They are not for use directly within the front matter (FRT) peripheral file.

If you are working with the Publishing Assistant InDesign publishing path, the following markup is needed for generating an automatic table of contents:

- Addition of **\toc1** (and optionally **\toc2**) markers after **\h**, within each scripture book (**\toc3** is not yet supported).
- Addition of the "\periph Table of Contents" (*USFM 2.0* = **\toc**) sub-group marker within the FRT peripheral file.

Complete details of this process are provided in the [Publishing Assistant User Guide](#).

## 2.1 Book Abbreviations

This table lists all the standard 3-character book abbreviations that can be entered after `\id` marker at the top of each USFM file. Some scripture editors like [Paratext](#) may also include the number shown for each book in the filename for that book.

Number	Abbreviation	English name	Alternative name/Further explanatory notes
01	GEN	Genesis	1 Moses in some Bibles
02	EXO	Exodus	2 Moses in some Bibles
03	LEV	Leviticus	3 Moses in some Bibles
04	NUM	Numbers	4 Moses in some Bibles
05	DEU	Deuteronomy	5 Moses in some Bibles
06	JOS	Joshua	
07	JDG	Judges	
08	RUT	Ruth	
09	1SA	1 Samuel	1 Kings or Kingdoms in Orthodox Bibles; do not confuse this abbreviation with ISA for Isaiah
10	2SA	2 Samuel	2 Kings or Kingdoms in Orthodox Bibles
11	1KI	1 Kings	3 Kings or Kingdoms in Orthodox Bibles
12	2KI	2 Kings	4 Kings or Kingdoms in Orthodox Bibles
13	1CH	1 Chronicles	1 Paralipomenon in Orthodox Bibles
14	2CH	2 Chronicles	2 Paralipomenon in Orthodox Bibles
15	EZR	Ezra	This is for Hebrew Ezra, sometimes called 1 Ezra or 1 Esdras; also for Ezra-Nehemiah when one book
16	NEH	Nehemiah	Sometimes appended to Ezra; called 2 Esdras in the Vulgate
17	EST	Esther (Hebrew)	This is for Hebrew Esther; for the longer Greek LXX Esther use ESG
18	JOB	Job	
19	PSA	Psalms	150 Psalms in Hebrew, 151 Psalms in Orthodox Bibles, 155 Psalms in West Syriac Bibles, if you put Psalm 151 separately in an Apocrypha use PS2, for Psalms 152-155 use PS3
20	PRO	Proverbs	31 Proverbs, but 24 Proverbs in the Ethiopian Bible
21	ECC	Ecclesiastes	Qoholeth in Catholic Bibles; for Ecclesiasticus use SIR
22	SNG	Song of Songs	Song of Solomon, or Canticles of Canticles in Catholic Bibles
23	ISA	Isaiah	Do not confuse this abbreviation with 1SA for 1 Samuel
24	JER	Jeremiah	The Book of Jeremiah; for the Letter of Jeremiah use LJE
25	LAM	Lamentations	The Lamentations of Jeremiah
26	EZK	Ezekiel	
27	DAN	Daniel (Hebrew)	This is for Hebrew Daniel; for the longer Greek LXX Daniel use DAG
28	HOS	Hosea	
29	JOL	Joel	
30	AMO	Amos	
31	OBA	Obadiah	
32	JON	Jonah	Do not confuse this abbreviation with JHN for John
33	MIC	Micah	
34	NAM	Nahum	
35	HAB	Habakkuk	
36	ZEP	Zephaniah	

37	HAG	Haggai	
38	ZEC	Zechariah	
39	MAL	Malachi	
41	MAT	Matthew	The Gospel according to Matthew
42	MRK	Mark	The Gospel according to Mark
43	LUK	Luke	The Gospel according to Luke
44	JHN	John	The Gospel according to John
45	ACT	Acts	The Acts of the Apostles
46	ROM	Romans	The Letter of Paul to the Romans
47	1CO	1 Corinthians	The First Letter of Paul to the Corinthians
48	2CO	2 Corinthians	The Second Letter of Paul to the Corinthians
49	GAL	Galatians	The Letter of Paul to the Galatians
50	EPH	Ephesians	The Letter of Paul to the Ephesians
51	PHP	Philippians	The Letter of Paul to the Philippians
52	COL	Colossians	The Letter of Paul to the Colossians
53	1TH	1 Thessalonians	The First Letter of Paul to the Thessalonians
54	2TH	2 Thessalonians	The Second Letter of Paul to the Thessalonians
55	1TI	1 Timothy	The First Letter of Paul to Timothy
56	2TI	2 Timothy	The Second Letter of Paul to Timothy
57	TIT	Titus	The Letter of Paul to Titus
58	PHM	Philemon	The Letter of Paul to Philemon
59	HEB	Hebrews	The Letter to the Hebrews
60	JAS	James	The Letter of James
61	1PE	1 Peter	The First Letter of Peter
62	2PE	2 Peter	The Second Letter of Peter
63	1JN	1 John	The First Letter of John
64	2JN	2 John	The Second Letter of John
65	3JN	3 John	The Third Letter of John
66	JUD	Jude	The Letter of Jude; do not confuse this abbreviation with JDG for Judges, or JDT for Judith
67	REV	Revelation	The Revelation to John; called Apocalypse in Catholic Bibles
68	TOB	Tobit	
69	JDT	Judith	
70	ESG	Esther Greek	
71	WIS	Wisdom of Solomon	
72	SIR	Sirach	Ecclesiasticus or Jesus son of Sirach
73	BAR	Baruch	5 chapters in Orthodox Bibles (LJE is separate); 6 chapters in Catholic Bibles (includes LJE); called 1 Baruch in Syriac Bibles
74	LJE	Letter of Jeremiah	Sometimes included in Baruch; called "Rest of Jeremiah" in Ethiopia
75	S3Y	Song of the 3 Young Men	Includes the Prayer of Azariah; sometimes included in Greek Daniel
76	SUS	Susanna	Sometimes included in Greek Daniel
77	BEL	Bel and the Dragon	Sometimes included in Greek Daniel; called "Rest of Daniel" in Ethiopia
78	1MA	1 Maccabees	Called 3 Maccabees in some traditions, printed in Catholic and Orthodox Bibles
79	2MA	2 Maccabees	Called 1 Maccabees in some traditions, printed in Catholic and Orthodox Bibles
80	3MA	3 Maccabees	Called 2 Maccabees in some traditions, printed in Orthodox Bibles

81	4MA	4 Maccabees	In an appendix to the Greek Bible and in the Georgian Bible
82	1ES	1 Esdras (Greek)	The 9 chapter book of Greek Ezra in the LXX, called 2 Esdras in Russian Bibles, and called 3 Esdras in the Vulgate; when Ezra-Nehemiah is one book use EZR
83	2ES	2 Esdras (Latin)	The 16 chapter book of Latin Esdras called 3 Esdras in Russian Bibles and called 4 Esdras in the Vulgate; for the 12 chapter Apocalypse of Ezra use EZA
84	MAN	Prayer of Manasseh	Sometimes appended to 2 Chronicles, included in Orthodox Bibles
85	PS2	Psalms 151	An additional Psalm in the Septuagint, appended to Psalms in Orthodox Bibles
86	ODA	Odae/Odes	A book in some editions of the Septuagint; Odes has different contents in Greek, Russian and Syriac traditions
87	PSS	Psalms of Solomon	A book in some editions of the Septuagint, but not printed in modern Bibles
A4	EZA	Ezra Apocalypse	12 chapter book of Ezra Apocalypse; called 3 Ezra in the Armenian Bible, called Ezra Shealtiel in the Ethiopian Bible; formerly called 4ES; called 2 Esdras when it includes 5 Ezra and 6 Ezra
A5	5EZ	5 Ezra	2 chapter Latin preface to Ezra Apocalypse; formerly called 5ES
A6	6EZ	6 Ezra	2 chapter Latin conclusion to Ezra Apocalypse; formerly called 6ES
B2	DAG	Daniel Greek	The 14 chapter version of Daniel from the Septuagint including Greek additions
B3	PS3	Psalms 152-155	Additional Psalms 152-155 found in West Syriac manuscripts
B4	2BA	2 Baruch (Apocalypse)	The Apocalypse of Baruch in Syriac Bibles
B5	LBA	Letter of Baruch	Sometimes appended to 2 Baruch; sometimes separate in Syriac Bibles
B6	JUB	Jubilees	Ancient Hebrew book used in the Ethiopian Bible
B7	ENO	Enoch	Sometimes called 1 Enoch; ancient Hebrew book in the Ethiopian Bible
B8	1MQ	1 Meqabyan/Mekabis	Book of Mekabis of Benjamin in the Ethiopian Bible
B9	2MQ	2 Meqabyan/Mekabis	Book of Mekabis of Moab in the Ethiopian Bible
C0	3MQ	3 Meqabyan/Mekabis	Book of Meqabyan in the Ethiopian Bible
C1	REP	Reproof	Proverbs part 2: Used in the Ethiopian Bible
C2	4BA	4 Baruch	Paralipomenon of Jeremiah, called Rest of the Words of Baruch in Ethiopia; may include or exclude the Letter of Jeremiah as chapter 1, used in the Ethiopian Bible
C3	LAO	Letter to the Laodiceans	A Latin Vulgate book, found in the Vulgate and some medieval Catholic translations

## 3 Introductions

### Markers in this section:

`\imt#`, `\is#`, `\ip`, `\ipi`, `\im`, `\imi`, `\ipq`, `\imq`, `\ipr`, `\iq#`, `\ib`, `\ili`, `\iot`, `\io#`, `\ior...ior*`, `\iex`, `\igt...igt*`, `\imte`, `\ie`

### `\imt#_text...`

- Introduction major title.
- The variable # denotes the title level or relative weighting.
- `\imt = \imt1` (see [Syntax Notes](#))

**Recommended use:** May be used for the introduction title or other major introduction division (rather than `\is`) when the introduction text contains numerous additional sub-divisions.

#### ▼ Example

##### Text - Introduction to Mark (RVE)

```
\h SAN MARCOS
\mt2 Evangelio según
\mt1 SAN MARCOS
\imt1 INTRODUCCIÓN
\is1 Importancia del evangelio de Marcos
\ip Este evangelio, segundo de los libros del NT,
contiene poco material que no aparezca igualmente
en \bk Mateo\bk* y \bk Lucas.\bk*
```

##### Formatting Example

*Evangelio según*

**SAN MARCOS**

**INTRODUCCIÓN**

**Importancia del evangelio de Marcos**

, segundo de los libros del NT, contiene poco material  
ateo y Lucas. Apenas cinco pasajes de Marcos (3.7-12;

### `\is#_text...`

- Introduction section heading.
- The variable # denotes the title level or relative weighting.

**\cl\_**

- The chapter "label" to be used when the chosen publishing presentation will render chapter divisions as headings, and not drop cap numerals.

**Usage note:**

If \cl is entered *once before* chapter 1 (\c 1) it represents the text for "chapter" to be used throughout the current book. If \cl is used *after* each individual chapter marker, it represents the particular text to be used for the display of the current chapter heading (usually done if numbers are being presented as words, not numerals).

**No-break markup within poetry:**

Some translations have a publishing tradition of inserting a small amount of additional white-space at chapter boundaries. It is important in these texts to use the \nb marker within any specific poetic contexts where no visible break in the flow of the text is intended at a particular chapter boundary.

**\cls\_text...**

- Closure of an epistle/letter.
- Similar to "With love," or "Sincerely yours,".

## ▼ Example

**Text - Colossians 4.18 (GNT - markup adapted)**

**\li#(\_text...)**

- List item.
- An out-dented paragraph meant to highlight the items of a list.
- Lists may be used to markup the elements of a recurrent structure, such as the days within the creation account, or the Decalogue (10 commandments).
- The variable # represents the level of indent.
- `\li = \li1` (see [Syntax Notes](#))

**Text - Psalm 72.19 (GNT)**

```
\q1
\v 18 Praise the \nd Lord\nd*, the God of Israel!
\q1 He alone does these wonderful things.
\q1
\v 19 Praise his glorious name forever!
\q1 May his glory fill the whole world.
\b
\qc Amen! Amen!
\b
\q1
\v 20 This is the end of the prayers of David son of Jesse.
```

**Formatting Example**

<sup>18</sup> Praise the LORD, the God of Israel!  
He alone does these wonderful things.

<sup>19</sup> Praise his glorious name forever!  
May his glory fill the whole world.

Amen! Amen!

<sup>20</sup> This is the end of the prayers of David son of Jesse.

**\qs\_(Selah)\qs\***

- Used for the expression "Selah" commonly found in Psalms and Habakkuk.
- *A character style.*
- This text is frequently right aligned, and rendered on the same line as the previous poetic text, if space allows.

## ▼ Examples

**Text - Psalm 3.2 (NRSV)**

```
\c 3
\s1 Trust in God under Adversity
\d A Psalm of David, when he fled from his son Absalom.
\q1
\v 1 O \nd Lord\nd*, how many are my foes!
\q2 Many are rising against me;
\q1
\v 2 many are saying to me,
\q2 "There is no help for you \qs Selah\qs*

**\qm#(\_text...)**

- Embedded text poetic line.
- The variable # represents the level of indent (i.e. \qm1, \qm2 etc.).
- **\qm = \qm1** (📖 see [Syntax Notes](#))

## ▼ Example

**Text - 1 Chronicles 12.18 (GNT - markup adapted)**

```

\p
\v 18 God's spirit took control of one of them, Amasai, who
later became the commander of "The Thirty," and he called out,
\qm1 "David son of Jesse, we are yours!
\qm1 Success to you and those who help you!
\qm1 God is on your side."
\b
\m David welcomed them and made them officers in his army.

```

**Formatting Example**

<sup>18</sup>God's spirit took control of one of them, Amasai, who later became the commander of "The Thirty," and he called out.

*"David son of Jesse, we are yours!  
Success to you and those who  
help you!  
God is on your side."*

David welcomed them and made them officers in his army.

**\b**

- Blank line.
- Use for stanza breaks in poetry, or between poetry and prose.

No text should follow this marker, and it should not be used before or after titles to indicate white-space.

## ▼ Examples

**Text - Psalm 3 (GNT)**

```
\c 3

**Formatting Example****A Prayer of Habakkuk**

**3** This is a prayer of the prophet  
Habakkuk:

<sup>2</sup> O LORD, I have heard of what  
you have done,  
and I am filled with awe.

## 8 Tables

### Markers in this section:

`\tr`, `\th#`, `\thr#`, `\tc#`, `\tcr#`

### `\tr_`

- Table row start.
- The first `\tr` initiates a new table.
- Rows contain column headings or cells.

### `\th#_text...`

- Table column heading.
- The variable # represents the table column number.

### `\thr#_text...`

- Right aligned table column heading.
- The variable # represents the table column number.

#### ▼ Examples

##### Text - Numbers 7.12-83 (GNT)

```
\p
\v 12-83 They presented their offerings in the following order:
|
|  |

```

##### Text - Numbers 2.10-16 (GNT)

```
\p
\v 10-16 On the south, those under the banner of the division
of Reuben shall camp in their groups, under their leaders,
as follows:
|
|  |

```

##### Formatting Example

<sup>12-83</sup>They presented their offerings in the following order:

<i>Day</i>	<i>Tribe</i>	<i>Leader</i>
1st	Judah	Nahshon son of Amminadab
2nd	Issachar	Nethanel son of Zuar
3rd	Zebulun	Eliab son of Helon
4th	Reuben	Elizur son of Shedeur
5th	Simeon	Shelumiel son of Zurishaddai

##### Formatting Example

<sup>3-9</sup>On the east side, those under the banner of the division of Judah shall camp in their groups, under their leaders, as follows:

<i>Tribe</i>	<i>Leader</i>	<i>Number</i>
Judah	Nahshon son of Amminadab	74,600
Issachar	Nethanel son of Zuar	54,400
Zebulun	Eliab son of Helon	57,400
Total:		186,400

**\tc#\_text...**

- Table cell.
- The variable # represents the table column number.

**\tcr#\_text...**

- Right aligned table cell.
- The variable # represents the table column number.

## ▼ Examples

**Text - Numbers 2.10-16 (GNT)**

```

\p
\v 10-16 On the south, those under the banner of the division
of Reuben shall camp in their groups, under their leaders,
as follows:
\tr \th1 Tribe \th2 Leader \thr3 Number
\tr \tc1 Reuben \tc2 Elizur son of Shedeur \tcr3 46,500
\tr \tc1 Simeon \tc2 Shelumiel son of Zurishaddai \tcr3
59,300
\tr \tc1 Gad \tc2 Eliasaph son of Deuel \tcr3 45,650
\tr \tc1 \tcr2 Total: \tcr3 151,450

```

**Formatting Example**

<sup>3-9</sup>On the east side, those under the banner of the division of Judah shall camp in their groups, under their leaders, as follows:

<i>Tribe</i>	<i>Leader</i>	<i>Number</i>
Judah	Nahshon son of Amminadab	74,600
Issachar	Nethanel son of Zuar	54,400
Zebulun	Eliab son of Helon	57,400
	Total:	186,400

**Markup for empty table cells:**

As shown in the example for `\tc#` (above), an empty table cell still requires a corresponding marker in the table text. The following markup would be *incorrect*:  
`\tr \tcr2 Total: \tcr3 151,450`

## 9 Footnotes

### Markers in this section:

[\f...\f\\*](#), [\fe...\fe\\*](#), [\fr](#), [\fk](#), [\fq](#), [\fqa](#), [\fl](#), [\fp](#), [\fv](#), [\ft](#), [\fdc...\fdc\\*](#), [\fm...\fm\\*](#) [Examples](#)

### Footnote Syntax

Footnotes are entered inline within the main scripture body text using the following general syntax. The boundaries of the footnote text are defined by an opening and closing marker.

```
\f+_+(\fr_REF_)footnote content\f*
```

The individual elements which make up the note content are described under the heading [Footnote Content Elements](#) below.

#### \f\_

- Beginning (opening) of the footnote element.

#### +

- The footnote caller, which may be one of the following three types:
  - + — indicates that the caller should be generated automatically by the translation editor, or publishing tools.
  - — indicates that no caller should be generated, and is not used.
  - ? — where ? represents the character to be used for the caller. The caller is defined for the specific note by the author.

### footnote content

- All of the text elements which make up the footnote:
  - origin reference
  - special footnote elements such as keywords, quotations, alternate renderings etc.
  - footnote text
- Each element should be prefixed by the appropriate marker (listed below).

**i** **Important:** See [Syntax Notes](#) for additional information on the use of endmarkers for elements within footnote content.

#### \f\*

- End (closing) of the footnote element.

### Endnote Syntax

Notes which are intended as "Endnotes" should be marked using the following alternative format:

```
\fe+_+(\fr_REF_)footnote content\fe*
```

## Footnote Content Elements

The following markup can be included as part of the footnote content:

### `\fr_##SEP##`

- Footnote "origin" reference.
- This is the chapter and verse(s) that note refers to.
- "SEP" indicates where the appropriate chapter/verse separator should be used (i.e. colon ":", full stop ".", etc.)

### `\fk_`

- Footnote keyword.
- The specific keyword/term from the text for which the footnote is being provided.

### `\fq_`

- Footnote translation quotation.
- A quotation from the current scripture text translation for which the note is being provided.
- Longer quotations are sometimes shortened using an ellipsis (i.e. suspension dots "...").

 Many existing translation texts have marked both quotations from the existing translation text, as well as alternative translations, using `\fq`. An additional marker – `\fqa` – is provided for marking alternative translations, and can be used to distinguish between quotations and alternatives.

### `\fqa_`

- Footnote alternate translation.
- Used to distinguish between a quotation of the current scripture text translation, and an alternate translation.

### `\fl_`

- Footnote "label" text.
- Can be used for marking or "labeling" a word or words which are used consistently across certain types of translation notes (such as the words "Or" in an alternative translation note, "Others", "Heb.", "LXX" etc.).

### `\fp_`

- Footnote additional paragraph.
- Use this marker to if you need to indicate the start of a new paragraph within a footnote (uncommon).

 If you are editing your scripture translation using **Paratext 6.x**, add a soft-return before the `\fp` marker in order to display a new line in formatted view.

### `\fv_##\fv*`

- Footnote verse number.
- To mark a verse number in the the text quotation or alternative translation.

 This marker will typically be *nested* within another footnote content element, like `\ft`, `\fq` or `\fqa`. See [Nesting Character Markup](#) for details.

### `\ft_`

- Footnote text.
- The essential (explanatory) text of the footnote.

**\fdc\_refs...\fdc\***

- Text between these markers is material to be included only in published editions that contain the Deuterocanonical books.

**\fm\_...\fm\***

- Footnote reference mark.
- Used where two or more locations in the scripture text should ideally refer the reader to the same footnote text (as seen in identical footnote text which is referred to at Gen 2.9 and Gen 2.17 in some English translations).

Because the nature of this marker is related directly to the published form of the text, it is not intended for use in scripture authoring. It may be used during the publishing process to connect two callers to the same footnote text.

**Footnote Examples**

## ▼ Quotations and Alternative Translations

**Text - Mark 1.1; 1.4 (GNT)**

```
\s1 The Preaching of John the Baptist

 context as “human beings.”

## ▼ Footnote Verse

**Text - John 7.38 (GNT)**

\p  
 \v 37 On the last and most important day of the festival Jesus stood up and said in a loud  
 voice, “Whoever is thirsty should come to me, and  
 \v 38 whoever believes in me should drink. As the scripture says, ‘Streams of life-giving water  
 will pour out from his side.’” \f + \fr 7.38: \ft Jesus' words in verses 37-38 may be  
 translated: \fqa “Whoever is thirsty should come to me and drink. \fv 38 \fv\* As the  
 scripture says, ‘Streams of life-giving water will pour out from within anyone who believes in

## 10 Cross References

### Markers in this section:

[\x...\x\\*](#), [\xo](#), [\xk](#), [\xq](#), [\xt](#), [\xot...\xot\\*](#), [\xnt...\xnt\\*](#), [\xdc...\xdc\\*](#) [Examples](#)

### Cross Reference Syntax

Cross references are entered inline within the main scripture body text using the following general syntax. The boundaries of the cross reference text are defined by an opening and closing marker.

```
\x_+(\xo_REF_)cross reference content\x*
```

The individual elements which make up the cross reference content are described under the heading [Cross Reference Content Elements](#) below.

#### [\x\\_](#)

- Beginning (opening) of the cross reference element.

#### +

- The cross reference caller, which may be one of the following three types:
  - + — indicates that the caller should be generated automatically by the translation editor, or publishing tools.
  - — indicates that no caller should be generated, and is not used.
  - ? — where ? represents the character to be used for the caller. The caller is defined for the specific cross reference by the author.

### cross reference content

- All of the text elements which make up the cross reference:
  - origin reference
  - special cross reference elements such as keywords or quotations
  - target references
- Each element should be prefixed by the appropriate marker (listed below).

**i** **Important:** See [Syntax Notes](#) for addition information on the use of endmarkers for elements within cross reference content.

#### [\x\\*](#)

- End (closing) of the cross reference element.

## Cross Reference Content Elements

The following markup can be included as part of the cross reference content:

### **\xo\_##SEP##**

- Cross reference "origin" reference.
- This is the chapter and verse(s) that target reference(s) are being provided for.
- "SEP" indicates where the appropriate chapter/verse separator should be used (i.e. colon ":", full stop "." etc.)

### **\xk\_**

- A keyword from the scripture translation text which the target reference(s) also refer to.

### **\xq\_**

- A quotation from the scripture text.
- Use of a quotation would be intended to help the reader to understand the portion of text (or concept) for which the target reference(s) are being supplied.

### **\xt\_**

- Target reference(s).
- The list of target scripture locations being provided as alternate references to the text (or concept) of the origin reference.
- This is a list of book name abbreviations and chapter + verse references, separated by semicolons (though there may be an alternate references format for this list in different areas and countries).

### **\xot\_refs... \xot\***

- References (or other text) between these markers is material to be included only in published editions that contain the Old Testament books. (*optional*)

### **\xnt\_refs... \xnt\***

- References (or other text) between these markers is material to be included only in published editions that contain the New Testament books. (*optional*)

### **\xdc\_refs... \xdc\***

- References (or other text) between these markers is material to be included only in published editions that contain the Deuterocanonical books. (*optional*)

📄 [Nesting Character Markup](#)

### Notes about character-level markup in USFM:

- Elements in this section mark portions of text within a larger paragraph unit. This type of element is often referred to generically as a *character style*, where the larger containing text units are often referred to as *paragraph styles*. In the case of a text markup scheme like USFM, the term "style" is somewhat misleading, in that the essential goal of USFM is to mark common scriptural element types, and not formatting information. Bearing that in mind, USFM has also inherited and attempted to unify a long history of SFM type scripture markup "standards", some of which were more or less strict in their tolerance for format-oriented markers. We have not wished to create an unworkable migration task for legacy SFM encoded texts.
- Translation editing software which implement support for USFM encoded text may provide a formatted view of the text using a set of style definitions for each USFM marker. These "stylesheets" most often refer to the formatting definitions as paragraph and character styles.

#### About nesting character level markup in USFM (>2.4):

USFM 2.4 adds a new syntax for indicating that a *nesting* of one character level marker within another is taking place within a text. See [Nesting Character Markup](#) for details.

## Special Text

### `\add_... \add*`

- Translator's addition.
- A translator's explanation; words added by the translator for clarity – text which is not literally a part of the original language, but which was supplied to make the meaning of the original clear.

#### ▼ Example

##### Text - Genesis 5.29 (Russian Synodal, Protestant Version)

```
\p
\v 29 И нарек ему имя: Ной, сказав: он утешит нас в работе
нашей и в трудах рук наших при \add возделывании\add*
земли, которую проклял Господь.

## 11.1 Nesting Character Markup

In USFM, character level markup is applied to text *within* a containing paragraph element like \p or \q1. Footnotes and cross references are marked using a containing element pair like \f ... \f\* or \x ... \x\*. The USFM markup used within note elements (like \fq or \ft etc.) are also a type of character level marker.

In some scripture translation texts, the USFM markup required to properly mark the types of content within the text will result in one character level marker being "nested" within another character level marker. In this situation it is critical that the editing and publishing environments used for working with the text understand how to interpret, present, and validate the nested markup contexts. Normally, in  Paratext, the start of a new character level marker environment is also recognized by the program as an implicit closure of the the previous character environment. When a nested character markup is actually intended, the meaning and formatting applied to the outer layer of the nested markup context should also apply to the inner level(s). The inner markup communicates an additional meaning and formatting for the nested text.

Perhaps the most common occurrence for nested character markup is within footnotes, where some text occurring within a footnote quotation (\fq), keywords (\fk), or footnote text itself (\ft), needs to be marked further.

USFM 2.4 adds a new syntax for indicating that a nesting of one character level marker within another is taking place within a text. Full support for the nested markup syntax has been included in Paratext >=7.4, Publishing Assistant >=4.1, and the XML export format from Paratext known as "USX".

### Indicating that a character marker is nested

When a character level marker is used to mark text already inside of an existing character level environment, a plus sign "+" should be used as a prefix to the opening and closing forms of the new nested marker. The + is added after the backslash, and before the marker text. The + indicates that a new character environment has started, without closing the previous one.

In the following example:

- \+nd indicates to start a new character environment nested inside the existing \add environment (without closing \add)
- \+nd\* indicates to end the nested environment without closing \add

The following is a **\add** translator's addition containing the word **\+nd Lord\+nd\*** within it **\add\***

All normal character marker starts (without the + prefix) close all existing nesting. The following two examples are both valid nested character markup.

\p ... **\add** an addition containing the word **\+nd Lord\+nd\*\add\*** and further text to follow ...

\p ... **\add** an addition containing the word **\+nd Lord\add\*** and further text to follow ...

If necessary, multiple levels of nesting character markup can occur.

 A  Paratext project's project stylesheet(s) will not contain definitions for the nested markers containing +.

(The Arnon was the border between the Moabites and the Amorites.) <sup>14</sup>That is why *The Book of the LORD's Battles* speaks of "...the town of Waheb in the area of Suphah, and the valleys; the Arnon River, <sup>15</sup>and the slope of the valleys that extend to the town of Ar and toward the border of Moab."

# 12 Peripherals

## Introduction

The following represents a strategy for applying USFM markup to various peripheral content elements which may be prepared for publication in addition to the scripture body text. Peripheral content markup is accomplished through re-purposing the most appropriate existing USFM marker for the current content type.

As with scripture text books, an `\id` marker is used for identifying the content of the peripheral file. Content should be created in separate book files according to the following general groupings. Within each book, divisions (sub-sections) of content are denoted using the marker `\periph` followed by an additional division argument/title. In practice we find that some back matter content is large enough to require storing it in its own book file (Concordance, Glossary, Topical Index, Names Index).

**i** **USFM 2.0x** defined a unique marker for each peripheral content division. **USFM 2.1** uses a single `\periph` marker. Where relevant, the previous 2.0x division marker is listed below in parentheses, following the 2.1 syntax.

### User defined peripheral content divisions:

As needed, a user may add peripheral content for a division not defined in the list above. The new division should begin with `\periph`, plus a division argument/title. However, USFM compliant publishing applications should use the list presented here as a reference for content to support.

## USFM Markup for Peripherals

In the following topics there is a recommendation and a brief description of the USFM markers which will be most appropriate for use in each peripheral content division. The recommended markup is sufficient for most projects and should be used as a first option. However, in general, any of the existing USFM standard markers may be used in addition to the recommended markers, if the required content cannot be adequately encoded.

Any non-standard markers used in these books will need to be added to the stylesheet associated with the project.

### Authoring peripheral materials within Paratext

Paratext includes the named peripheral books FRT, INT, BAK, CNC, GLO, TDX, NDX, and OTH in addition to the XXA-XXG set.

Paratext supports a set of non-Biblical books, named XXA-XXG. These appear at the end of a project's list of books, and may be used to author non-biblical text for Front Matter (titles, preface etc.), Back Matter (glossary, concordance etc.), or any other kind of text which should logically be stored as part of the translation project.

\mt1 Foreword
\p The \bk Good News Translation\bk* of the Bible is a translation which seeks to state
clearly and accurately the meaning of the original texts in words and forms that are widely
accepted by people who use English as a means of communication. This translation does
not follow the traditional vocabulary and style found in the historic English Bible versions.
Rather it attempts for our time to set forth the biblical content and message in the
standard, everyday, natural form of English.
\p The aim of this Bible is to give today's reader best possible understanding of the
content of the original texts. The Preface sets forth the basic principles which the
translators followed in their work and explains the nature of special aids for readers.
\p The bk Good News Translation was translated and published by the United Bible
Societies for use throughout the world. The Bible Societies trust that the reading and study
of this translation will result in a better understanding of the meaning of the Bible. We also
earnestly pray that readers will discover the message of saving faith and hope for all
people, which the Bible announces anew to each generation.

**\periph** NT Quotes from LXX  
 \ip The writers of the New Testament generally quoted or paraphrased the ancient Greek translation of the Old Testament, commonly known as the Septuagint Version (LXX), made some two hundred years before the time of Christ. In a number of instances this version differs significantly in meaning from the Masoretic Hebrew text, and as a special help to the reader such occurrences of LXX quotations, paraphrases, or evident allusions are listed here. The following translations of the LXX passages reflect in general the wording of \bk Good News Translation\bk\* of the New Testament. When, however, a LXX quotation occurs several times in the New Testament, the GNT wording of the translation may vary because of evident differences in meaning or emphasis reflected in the different contexts. Chapter and verse numbers are those of the English Bible.

## 13 Study Bible Content

A study Bible project text is based on an existing scripture translation text. It may be referred to as a "derived text". Typically one or more of the following study content types are added to the text. To distinguish study Bible content from the base translation text, a small set of additional USFM markers are used to indicate the beginning and ending point of the extended study content types.

- Extended book introductions
- Division and section introductions
- Extended footnotes: \ef ... \ef\*
- Extended cross references: \ex ... \ex\*
- Sidebars (also referred to as "mini-articles"): \esb ... \esbe

A set of study Bible content categories can be defined and inserted into any study content type using the \cat ... \cat\* markers.

### **Important Notes:**

The use of USFM markup for study Bible authoring is supported by an editing environment which understands the structure of study additions to a standard USFM scripture translation text. Paratext 7.3 and beyond provides support for study Bible content authoring through an enhanced multi-pane editing window. A project must be initiated in Paratext specifically as a Study Bible project in order to have these enhancements enabled.

Study Bible projects initiated in earlier versions of Paratext will have used a multiple project arrangement in order to manage the various study content items. These projects will need to be merged into a single study Bible project in order to make use of the enhanced editor in Paratext 7.3. Paratext 7.3 provides a software tool to assist with merging multi-project study Bible contents.

Please ask your Paratext supporter for additional help with initial study Bible setup and configuration. Paratext Helps on working with study Bibles, and a [Study Bible Authoring guide](#) are also available to registered users from the Paratext website.

## 13.1 Extended Book Introductions

Extended or alternative book introduction text should replace any existing book introduction text from the base scripture translation text. Any USFM identification (metadata) elements (`\h`, `\toc1`, `\toc2`, `\toc3`), `main title(s)`, `introduction` elements, and `table` elements can be included within the extended book introduction.

In \bk Mark\bk\* the title is used of Jesus in three ways: the Son of Man acts with divine power (2.10, 28); he will be rejected, will suffer and die (8.31; 9.9, 12, 31; 10.33-34, 45; 14.21, 41); he will return in power and glory (8.38; 13.26; 14.62).

## 13.2 Division and Section Introductions

Study Bibles often include additional explanatory text at the beginning of **divisions** or **sections** within the scripture text. The following USFM marker and content sequence can be added to the text:

1. A major section (`\ms`), or section (`\s`) marker
2. An *optional* parallel reference or scope markers (`\mr`, `\sr`, `\r`)
3. One or more introduction paragraph markers (`\ip`)

In some cases the base translation text does NOT already contain a division or section heading. In these cases the major section or section markers should be added to the text. In other cases the base translation text already includes a division or section heading. In these cases the content of the headings can be edited or replaced, if necessary, and introduction paragraph marker(s) added below.

## 13.3 Extended Footnotes

The **extended footnotes** are inserted inline within the study project text using the following general syntax. The boundaries of the footnote text are defined by an opening and closing marker. The remainder of the note is written using standard USFM footnote content element markers.

```
\ef+_({fr_REF_})footnote content\ef*
```

### \ef\_

- Beginning (opening) of the extended footnote element.

### +

- The extended footnote caller, which may be one of the following three types:
  - + — indicates that the caller should be generated automatically by the translation editor, or publishing tools.
  - — indicates that no caller should be generated, and is not used.
  - ? — where ? represents the character to be used for the caller. The caller is defined for the specific note by the author.

### footnote content

- All of the text elements which make up the extended footnote. Refer to the documentation on using standard USFM footnote content element markers.

### \ef\*

- End (closing) of the extended footnote element.
- The \xt (cross reference target) element can be used for the purpose of marking references within note text to other scripture or note passages
- Other standard USFM character level markup may be included, such as:
  - \w - Wordlist/Glossary/Dictionary reference
  - \nd, \bk, \tl, \pn - Name of Deity, Quoted book title, Transliterated word, Proper name

## 13.4 Extended Cross References

The **extended (study) cross references** are inserted inline within the study project text using the following general syntax. The boundaries of the cross reference text are defined by an opening and closing marker. The remainder of the cross reference is written using standard USFM cross reference content element markers.

```
\ex_+(\xo_REF_)cross reference content\ex*

### \ex\_

- Beginning (opening) of the cross reference element.

### +

  - + — indicates that the caller should be generated automatically by the translation editor, or publishing tools.
  - — indicates that no caller should be generated, and is not used.
  - ? — where ? represents the character to be used for the caller. The caller is defined for the specific cross reference by the author.

### cross reference content

- All of the text elements which make up the extended cross reference. Refer to the documentation on using standard USFM cross reference content element markers.

**Important:** See [Syntax Notes](#) for additional information on the use of endmarkers for elements within cross reference content.

### \ex\*

- End (closing) of the cross reference element.

## 13.5 Sidebars

Sidebars may contain larger sections of topical content, or information for more in-depth study. This content is associated with a general area in the scripture reference text, but not necessarily a specific verse or word. Sidebars are inserted within the study project text using the following general syntax. The boundaries of the sidebar content are defined by an opening and closing marker. The remainder of the sidebar content is written using any USFM [title](#), [paragraph](#), [poetry](#), [table](#), or [special text](#) marker elements.

```
\esb
\ms Sidebar Title
<sidebar content>
\esbe
```

### \esb\_

- Beginning (opening) of the sidebar content section.

### sidebar content

- All of the text elements which make up the sidebar content. Refer to the documentation on using standard USFM [title](#), [paragraph](#), [poetry](#), [table](#), or [special text](#) marker elements.
- Sidebars normally begin with an [\ms](#) marker, used for providing a title to the sidebar content.
- Illustrations can be added to sidebar content sections using the USFM `\fig...\fig*` marker.

### \esbe

- End (closing) of the sidebar content.

**i** **Important:** The normal USFM syntax for other note or character type markers which define *content boundaries* is to close the content section using a marker which is identical to the opening marker plus an added asterisk (e.g. `\f ... \f*` or `\ef ... \ef*`). The syntax for sidebar content does not follow this pattern. The closing marker is unique (`\esbe`). This is necessary because the content of a sidebar contains many additional paragraph style types. All other note types with content boundaries only contain character styles.

## Fish and Fishing

In Jesus' time, fishing took place mostly on lake Galilee, because Jewish people could not use many of the harbors along the coast of the Mediterranean Sea, since these harbors were often controlled by unfriendly neighbors. The most common fish in the Lake of Galilee were carp and catfish. The Law of Moses allowed people to eat any fish with fins and scales, but since catfish lack scales (as do eels and sharks) they were not to be eaten (Lev 11.9-12). Fish were also probably brought from Tyre and Sidon, where they were dried and salted.

The creation story tells that God ordered the waters of the earth to bring forth fish along with all other kinds of sea plants and animals (Gen 1.20-22). God gave human beings control over creation, including fish (Gen 1.28; Psa 8.6-8), but people are forbidden to make or worship an image of any created thing, including fish (Deu 4.15-18). When God renews the

creation, the salty Dea Sea will become fresh water and will be filled with fish (Ezk 47.7-10).

Fishing was also an important source of jobs and income in Galilee, and several of Jesus' followers were fishermen. Jesus told them that they were going to bring in people instead of fish (\nxt Mrk 1.16,17; Mat 4.18,19\xt\*). When Jesus fed the hungry crowd that followed him out of town, the food he provided was bread and fish (Mrk 6.30-44; Mat 14.14-21; Luk 9.10-17). Jesus used fishing to show his disciples the amazing results they could expect from having faith in him and sharing the good news with others: the net the apostles threw into the lake became so full of fish that they could not pull it into their boat (Jhn 21.4-12).

Among early Christians, the fish was a favorite image for Jesus, because the Greek word for fish (*ichthus*) consists of the first letters of the Greek words that tell who Jesus is:

## 13.6 Content Categories

Categories can *optionally* be assigned to extended study notes or sidebars by supplying a **category tag** (name) inside of opening and closing `\cat ...\cat*` markers. Category tags should be restricted to alpha-numeric characters. A list of category tags are defined individually and uniquely for each study Bible project.

`\cat_<TAG>\cat*`

The [Paratext](#) translation editor provides an interface for supplying a pre-defined content category tag list for a study Bible project. Paratext can use this list to guide the author toward using only categories from the pre-defined set. Support for formatting content with different category tags needs to be provided by the publishing solution in use. The Custom Layout features in [Publishing Assistant](#) (>=4.0) provide advanced support for handling study content categories.
